

Great care is taken to create treatment plans that work for each individual patient. During thorough consultations, our dentists take their time to get to know you and find out what you would like to achieve through treatment. Our private dental clinic also provides smile makeovers, a truly bespoke package of cosmetic treatments designed to give you the smile you have always wanted.

In addition to dental care, Dr Richard Clinics offers a number of non-invasive cosmetic procedures including dermal fillers and anti-wrinkle injections; and has its own range of natural dental products and supplements.

“
Dr Marques is a true professional - his dental expertise, charming personality and great team make any visit to his dental practice a delight.

DR RICHARD CLINICS
LONDON

A private dental clinic
specialising in complex restorative,
aesthetic and implant dentistry

www.doctorrichardlondon.com

We offer a wide range of general and cosmetic dental treatment.

General Denistry

During regular check-ups, our dentists ensure that your gums, mouth and teeth remain healthy, and look out for signs of more serious conditions like oral cancer.

Emergency Dentistry

We provide emergency treatment to both existing and new clients, including extractions, prescriptions for antibiotics, emergency fillings and root canals.

Cosmetic Denistry

Cosmetic dentistry can give you the smile you have always wanted. The clinic uses cutting-edge techniques in whitening, veneers, implants and straightening, including iTero scanning and Invisalign.

Oral Hygiene

A deep clean and polish removes the build-up of plaque and tartar, and leaves you with a sparkling smile. It's recommended that you visit the dental hygienist every 3-6 months.

Teeth Whitening

Whitening your teeth is a quick and easy way to improve your appearance. Our in-clinic and at-home procedures (Enlighten, Zoom) are safe, highly-effective and colour-matched to you.

Smile Makeovers

This is a bespoke treatment plan tailored just for you. Following an in-depth consultation, the dentist will devise a package of cosmetic procedures to create your desired look.

Veneers and Inlays

Porcelain veneers give you a polished smile by improving the appearance of damaged, chipped or crooked teeth. You may also be recommended inlays for teeth that are decayed.

Invisalign and Braces

Our orthodontist can treat teeth that are crooked, spaced or out of alignment. We offer several different methods for straightening teeth. This includes traditional metal braces, invisible aligners and, for minor corrections, veneers and implants.

Dental Crowns

When a tooth is damaged, misshapen or decayed, a crown can be used to restore its natural shape and strength. We offer a range of different types: porcelain, ceramic and gold.

Dentures

For teeth that are missing, we can fit full or partial dentures. These are moulded to your mouth so they are comfortable, durable and natural-looking.

Dental Implants

Our dentists are highly trained in the latest implant techniques. We use the All-On-4®, a screw-retained device that can replace an entire arch of teeth and be supported on as few as four dental implants. These implants are authentic-looking and function like natural teeth.

Periodontics

This is to treat conditions that affect the gums, bones and soft tissue. The most common is gum disease, which can be treated with a deep scale, root planing or, in some cases, surgery.

Wisdom Teeth Removal

We recommend removing a wisdom tooth when it becomes impacted, as it can lead to gum disease and decay. Carried out under anaesthetic, the procedure is quick and pain-free.

Sedation Dentistry

Fear of dentists is very common, so there is no need to be embarrassed about it. For patients that are nervous about treatment, we offer various types of sedation.

Facial Aesthetics

This includes anti-wrinkle injections, dermal fillers, Restylane skin boosters, medical micro-needling and chemical peels. We also offer injections for migraines and excessive sweating.
